

Aerob Matador AMT 1

Dust removal unit with integrated ventilator

Bag filter units are removed from the front

Depending on the installed ventilator type, the ventilator performs at a negative pressure corresponding to the characteristic line.

Typical applications include the extraction of dust from grinding machines in the metal, timber, foundry and plastics industries.

Also suitable for the ventilation of mixers, mixing drums, and containers, as well for as mills used in the dyeing and food industries, chemicals, pharmaceuticals and related industries.

» **Built for a dust-free world:**
No more dust deposits in the filter interior in compliance with ATEX guidelines.

» **Rapid replacement:**
filters can be replaced in minutes with the help of a rapid replacement system.
