

BETH Double Line

BETHPULS double-line bag filters are equipped with filter surfaces

(?14,467 sq.ft. to 68,889 sq.ft.)

Custom-designed filters can be supplied with larger filter surfaces.

- Available standard pressure classes from ± 5.000 Pa to ± 14.000 Pa
- Explosion pressure shock resistant up to 1.4 bar with explosion pressure relief according to the VDI 3673 norm / DIN EN 14491 norm (DMT-tested)

Time-Tested

The BETH bag filter has been put to the test for decades of operation, proving its superior value time and again.

BETHPULS bag filters are **compact separators** with filter bags that are cleaned automatically by compressed air pulses.

Bag filters are mainly used for the **dry separation of dust particles** or for **recovering useful dusts** from air and other gas flows.

BETHPULS bag filters are ideally suited for rough and varying operating conditions.

Every BETHPULS bag filter can be expanded from the smallest to the largest available size and is equipped with state-of-the-art **electronic monitoring devices**.

Versatility is key: By **combining** the different designs with a

wide variety of filter media, we will find the **ideal solution for your particular filtration requirements** .

Equipped with the appropriate filter media, our bag filters can lower the dust concentration of clean gas to levels that stay comfortably below current and prospective emission limits.
