

## Oil Mist ESP

The technical design of the BETH Oil Mist Electrostatic Precipitator (ESP) is based on that of the BETH Wet ESP, but usually comes without a mist and cleaning water zone.

- For volume flows from 15,000 to 200,000 m<sup>3</sup>/h  
(? 8,828 to 117,720 cu.ft./min)

By request, the oil mist ESP can be equipped with

- CO<sub>2</sub> extinguishing system
- Fire protection flap
- Pipework
- Ventilator

### Cost-Efficient Alternative

Due to its extremely low maintenance requirements, the BETH Oil Mist ESP is a cost-efficient alternative to peripheral filter systems.

### Optimum Separation Rate

Aerosols and critical fine dust types with very low settling speed are separated at an optimum rate.
